The stage in the life of a plant structure during which the sample was taken, in the form of an accession number to a suitable controlled vocabulary (Plant Ontology, BBCH scale) A description of the plant part (e.g. leaf) or the plant product (e.g. resin) from which the sample was taken, in the form of an accession number to a suitable controlled vocabulary (Plant Ontology). Any information not captured by the other sample fields, including quantification, sample treatments and processing. The date and time when the sample was collected / harvested An identifier for the sample in a persistant repository, comprising the name of the repository and the accession number of the observation unit therein. Submission to the EBI Biosamples repository is recommended. URI are recommended when possible. An observed variable describes how a measurement has been made. environmental traity, associated to the method and unit of measurement code used to identify the variable in the data file. We recommend cising a variable definition from the Crop Ontology where possible. When we have the crop Ontology naming convention is recommended: variation and the composition of the variable. Accession number of the variable in the data file. We recommended when variable. Accession number of the variable in the Crop Ontology Name of the (plant or environmental) trait under observation Accession number of the trait in a suitable controlled vocabulary (Crop Ontology, Trait Ontology). Name of the method of observation Accession number of the method, which may extend a method defined in an external reference with specific parameters, e.g. growth stage, inoculation precise organ (leaf number) URI/DOI of reference describing the method. ine#		Environment			
NV-1					
NV-2	Environment parameters	Definition	Example	Format	
NV-3		Growth facility List of hourly air temperature throughout the			
۷V-4	Air temperature	experiment.	22 °C	Numeric	
NV-5	Organ temperature	List of hourly organ temperatures throughout the experiment	18 °C	Numeric	
NV-6	Change over the course of experiment	Difference between the maximum air temperature recorded and the minimum.	0.75 °C	Numeric	
11/7	Photon flux density (PPFD) measured	List of hourly Photosynthetic photon flux	PPFD: 89061 mol m-2 sd-1;	Text	
√V-7 √V-8	at plant or canopy level Average length of the light period	density (PPFD) throughout the experiment. Average length of the light period in h.	16	Numeric	
IV-9	Light intensity	Intensity of total light	[µmol m–2 s–1]	Numeric	
	Range in peak light intensity	Range in peak light intensity for the whole	[µmol m–2 s–1]	Numeric	
N/-10	Fraction of outside light intercepted by growth facility components and	experiment. Fraction of outside light intercepted by growth facility components and surrounding structures.	NUmber between 0 and 1	Numeric	
	surrounding structures Type of lamps used	Nature of the light source for controlled environments. XEO: 00137	fluorescent tubes; high intensity discharge (HID) lamps; light emitting diodes	Text	
IV-12	R/FR ratio	Red light to far red light ratio. XEO:00036	[MOI MOI-1]	Numeric	
		Intensity of UVA radiation (320-400 nm); XEO:	[W m-2]		
V-14	Daily UV-A radiation	00037 Intensity of UVB radiation (290-320 nm); XEO:		Numeric	
V-15	Daily UV-B radiation	00038	[W m-2]	Numeric	
V-16	Total daily irradiance	Intensity of total light (XEO:00034) averaged over the experiment. Denotes whether the atmospheric CO2	[W m-2]	Numeric	
V-17	Atmospheric CO2 concentration	concentrations were controlled during the experiment.	controlled; uncontrolled	Numeric	
IV-18	Average CO2 during the light and dark periods	Concentration of CO2 in the air during the light and dark periods (XEO:00023)	light period: 390 mLL-1; dark period: 450 mLL-1	Text	
NV-19	Vapour pressure deficit	Vector of hourly VPD throughout the experiment . The Vapour Pressure Deficit in the air defines the difference between the maximal amount of water in the air minus the actual amount during the light period in kPa (XEO:00021)	2 kPa	Numeric	
NV-20	Average relative humidity during the light period	The relative humidity describes the amount of water vapor in the air, generally expressed as the percentage of the maximum water vapor during the light period (XEO:00020)	30%	Numeric	
NV-21	Average VPDair during the dark period.	The Vapour Pressure Deficit in the air defines the difference between the maximal amount of water in the air minus the actual amount during the light period in kPa (XEO:00021) The relative humidity describes the amount of water	2.7 kPa	Numeric	
NV-22	Average relative humidity during the dark period	vapor in the air, generally expressed as the percentage of the maximum water vapor during the dark period (XEO:00020)	33%	Numeric	
IV-23		Rooting conditions	hydrononia plant gulturo		
IV-24	Rooting medium	An abiotic plant treatment (EO:0007191) involving the use of a solid or liquid substrate for growing plants or tissue-cultured plant samples.	hydroponic plant culture media; in vitro liquid growth medium; in vitro solid growth medium; soil environment	Plant Environment Ontology:'EO_0007147'	
V-25	Container type	Type of container used to grow/treat the plants. XEO:00040	pot; Petri dish; well; tray	Text	
	Container volume	Volume that is available to the roots. XEO:00113	[L]	Numeric	
_	Container height	Height of the container.	[m]	Numeric	
	Number of plants per containers	Number of plants per container. XEO:00112	X/container	Numeric	
V-29	Plot size	Description of experimental sites.	higher-level landform; land element and position; slope;	Crop Ontology: 'CO_715: 0000058'	
V-30	Sowing density	Sowing density.	x/plot	Natural Resource and Environment Ontology	
IV-31	Rooting medium replenishment	Frequency and volume of replenishment or addition of the rooting medium.		Text	
IV-32	рН	Value of soil pH, separated by a colon, the depth (cm) from where soil sample was taken. Multiple values are separated by semicolon.	7.7:40-60; 6.5; 4.3:10-20	Text	
IV-33	Porosity	A permeability quality inhering in a bearer by virtue of the bearer's disposition to admit the passage of gas or liquid through pores or interstices. PATO: 0000973	[%]	Numeric	
IV-34	Medium temperature	Temperature of the replenishment medium.	[°C]	Numeric	
IV-35		Soil penetration strength as measured by the standard penetration test (SPT; ISO 22476-3), the cone penetrometer test (CPT), in-situ vane shear tests, and shear wave velocity measurements.	[Pa m–2]	Numeric	
 IV-36	Water retention capacity	Potential energy of water per unit mass of water in the soil.XEO:00126	[g g-1 dry weight]	Numeric	
V-37	Organic matter content	Proportion of organic matter in the soil. XEO:00117	[%]	Numeric	
IV-38		Nutrients			
1V-39	Médium composition	Concentration of the nutrients	Ca (XEO:00058): 5 mg/L	XEML Environment Ontology:'XEO_00042' + Numeric	

ENV-40	Extractable N content per unit ground volume before fertiliser added	Extractable N content per unit ground area before fertiliser added	[mg/m2]	XEML Environment Ontology:'XEO_00054' +Numeric
ENV-41	Type and amount of fertiliser added per container/m2	The current practice in field /greenhouse management for fertilization	nitrogen: [concentration]; phosphorus: [concentration]	Crop Ontology:'CO_715: 0000204' + Numeric
ENV-42	Concentration of [nutrient] before start of the experiment	Concentration of a nutrient at the start of an experiment.	Ca (XEO:00058): 5 mg/L	XEML Environment Ontology:'XEO_00042' + Numeric
ENV-43	Extractable N content per unit ground area at the end of the experiment	Extractable N content per unit ground area at the end of the experiment	[mg/m2]	XEML Environment Ontology:'XEO_00054' +Numeric
ENV-44	Volume and timing of water added per container	A defined volume of water supplied to each pot.	[L]	Numeric
ENV-45	Matrix potential	Range in water potential for soil.	-10 to -30 kPa	Numeric
ENV-46	Watering regimen	The treatment involving an exposure to watering frequencies.	irrigation from top; irrigation from bottom; drip irrigation	Text
ENV-47	Composition of nutrient solutions used for irrigation	For all nutrients, including micronutrients, the ontology term with concentration.	Ca (XEO:00058): 5 mg/L	XEML Environment Ontology:'XEO_00042' + Numeric
ENV-48	Electrical conductivity	A conductivity quality inhering in a bearer by virtue of the bearer's ability to convey electricity.	[dS m-1]	Numeric

line #					
TR-1		rimental Factors that can be applied.			
TR-2	Factor type	Definition	Example factor values	Format	
TR-3	Seasonal environment	A plant treatment (EO:0001001) involving an exposure to a given conditions of regional seasons.	Spring season; dry season	Plant Environment Ontology:'EO_0007038'	
TR-4	Air treatment regime	The treatment involving an exposure to wind/air with varying degree of temperature, which may depend on the study type or the regional environment.	28/25°C(Day/Night)	Plant Environment Ontology:'EO_0007161'	
TR-5	Soil temperature regime	A physical plant treatment (EO:0007316) involving an exposure to varying degree of temperature, which may depend on regional environment.	27/25°C(Day/Night)	Plant Environment Ontology: 'EO_0007161'	
TR-6	Soil treatment regime	The treatment (EO:0007049) involving growing plants and exposing them to soil growth media with varying contents	sand content (10% v/v)	Plant Environment Ontology:'EO_0007161'	
TR-7	Antibiotic regime	A chemical treatment (EO:0007189) involving the use of antibiotic for selection purposes.	actinomycin D; 20mM;20ml per plant; Every week	Plant Environment Ontology:'EO_0007041'	
TR-8	Chemical administration	An abiotic plant treatment (EO:0007191) involving the applicati on of chemical(s).	Bion; 13,5mM; 5ml per plant; Every 15 days.	Plant Environment Ontology: 'EO 0007189'	
TR-9	Biotic treatment	A plant treatment (EO:0001001) involving the application of a biotic or biological factor such as a microbe, insect, animal, or plant or a combination thereof	rice tungro bacilliform virus (RTBV) 2.5 µl, incubated at room temperature for 10min	Plant Environment Ontology:'EO_0007357'	
TR-10	Fertilizer regime	A plant nutrient treatment (EO:0007241) involving the use of a fertilizer, a combination of plant nutrients.	Potassium phosphate; 50 Kg P. Ha/y 50 Kg K.Ha/y	Plant Environment Ontology:'EO_0007085'	
TR-11	Fungicide regime	A treatment (EO:0007167) involving the application of a fungicide; a chemical entity or mixture of chemical entities.	Benzothiadiazole; 10mM; 1ml; Every month	Plant Environment Ontology:'EO_0007268'	
TR-12	Gaseous regime	A physical plant treatment (EO:0007316) involving the application of a gas or a combination of gasses.	Carbon Dioxide; 20ppm	Plant Environment Ontology:'EO_0007023'	
TR-13	Gravity	The treatment involving use of gravity factor to study various types of responses in presence, absence or modified levels of gravity.	Zero gravity (International space station)	Plant Environment Ontology:'EO_0007146'	
TR-14	Plant hormone regime	A chemical treatment (EO:0007189) involving the use of growth hormones to study various types of responses on their extrinsic and/or intrinsic application.	Jasmonic acid; 1mM;20ml;	Plant Environment Ontology:'EO_0007165'	
TR-15	Herbicide regime	A treatment (EO:0007167) involving the application of a herbicide; a chemical entity or mixture of chemical entities.	SUREWET (Polyvinyl polymer and nonionic surfactant); 1,75mM; 5ml per plant; Sprayed every month	Plant Environment Ontology:'EO_0007183'	
TR-16	Mechanical treatment	A treatment involving the application of a mechanical force	Wounding, bending	Plant Environment Ontology: 'EO 0007373' / Text	
TR-17	Chemical regime	A chemical treatment (EO:0007189) involving the application of inorganic chemicals, nutriment, organic chemicals, etc. as supplement to study various types of responses	Cd 0.5 mg/L (Hydroponics), CdCl2 15mg.Cd/kg (soil)	Plant Environment Ontology:'EO_0007044'	
TR-18	Humidity regimen	A treatment involving an exposure to varying degree of humidity, which may depend on regional environment.	56%/70% (Day/Night)	Plant Environment Ontology:'EO_0007359'	
TR-19	Radiation (light, UV-B, X-ray) regime	A physical plant treatment (EO:0007316) involving an exposure with a radiation type, intensity or quantity. EMR is classified according to the frequency of its wave. The electromagnetic spectrum, in order of increasing frequency and decreasing wavelength, consists of radio waves, microwaves, infrared radiation, visible light, ultraviolet radiation, X-rays and gamma rays. (from Wikipedia).	200-280nm; 30min; every day	Plant Environment Ontology:'EO_0007151'	
TR-20	Dainfall ragima	Treatment involving an exposure to a given amount of rainfall.	79 rainfall events; 15,6mm (mean	Plant Environment Ontology:'EO 0007181'	
TR-21	Salt regime	This treatment may be used to simulate the growth conditions of sea coast regions and saline/sodic soils. A chemical treatment (EO:0007189) involving use of salts as supplement to liquid and soil growth media to study various types of responses on their application.	NaCl:150mM ; KCl:30mM	Plant Environment Ontology: EO_0007185'	
TR-22	Watering regime	Treatment involving an exposure to watering	20ml every 3 days	Plant Environment Ontology:'EO_0007383'	
TR-23	Water temperature	frequencies. Treatment involving an exposure to water with varying degree of temperature, which may depend on regional environment.	20°C	Plant Environment Ontology:'EO_0007160'	
TR-24	Standing water regime	The treatment involving an exposure to standing water during a plant's life span. This also results in anaerobic soil conditions for either long or short periods.	Flooding water, Deep water	Plant Environment Ontology:'EO_0007282'	
TR-25	Pesticide regime	A chemical treatment (EO:0007189) involving the application of a pesticide; a chemical entity or mixture of chemical entities.	Glyphosfate; 1.68 kg acid equivalent (a.e.) / ha	Plant Environment Ontology:'EO_0007167'	
TR-26	pH regime	The treatment involving exposure of plants to varying levels of pH of the growth media.	acidic pH soil environment	Plant Environment Ontology:'EO_0007171'	
TR-27	_			Text
